

BASIC CARDIAC LIFE SUPPORT + AUTOMATED EXTERNAL DEFIBRILLATOR COURSE

The Basic Cardiac Life Support (BCLS) + Automated External Defibrillator (AED) Course is an 8-hour programme designed to teach the skills of basic resuscitation for both adult and infant cardiac arrest victims. Participants will also be taught the essential skills of how to relieve an obstructed airway for both conscious and unconscious adult and infant victims.

In keeping with the current practice of basic resuscitation, participants will learn about the use of the AED and incorporating it into the steps of CPR for adult victims. They will learn how to utilise the AED in both single rescuer and two-rescuer settings.

The course comprises of the following compulsory modules:

- Module 1: One-rescuer Adult Cardiopulmonary Resuscitation
- Module 2: Adult Foreign-Body Airway Obstruction – Conscious to Unconscious
- Module 3: Incorporating AED use in Cardiopulmonary Resuscitation
- Module 4: Infant Cardiopulmonary Resuscitation
- Module 5: Infant Foreign-Body Airway Obstruction – Conscious to Unconscious

Classes are kept small with a very favourable trainer to trainee ratio to ensure maximum hands-on practice time for every participant. Participants can be assured of minimal 'waiting around' time with our training methodology.

Participants will be required to sit for a theory and practical assessment for all modules. Upon successful completion of all requirements, an NRC-accredited certificate will be issued to all participants.

Course Fees

For healthcare VWOs and private nursing homes with portable subsidies under MOH:

\$7.49 / pax for Singaporeans / SPRs (include GST)

\$41.73 / pax for non-Singaporeans / non-SPRs (include GST)

\$74.90 / pax for any other Orgs (include GST)

Venue: Lentor Training Centre

33, Ubi Avenue 3, #03-11

Vertex Tower B, Singapore 408868
